

Harness finished products

In HD-SDI signal transmission cable, the works on the connector processing have very important meaning. The best performance expected from the cable and connectors, or all fail can be decided by the installation works, even if the cable and connector themselves are the best in quality.

TACHII have been producing even for the harness finished products under the thoroughgoing and complete quality management system just like for the respective products.

The return loss property is significantly influenced by the heat in solder processing type connector, effective crimping to central contact (Crimp height management and crimp works without leaving gap, etc.) in crimp type connector. TACHII's harness finished products are reconfirmed to satisfy our internal specifications, and therefore our customers can make use of them with a sense of security.

TACHII invite our customers to take advantage of our harness finished products.

Multiple cable for hookup
RJP5-5CFWS
Finished products

In hookup use, set up Solder type BNC connector to keep reliability of the tensile strength. Available the exclusive sticker as per the above on both ends of cable. Please contact with our Sales representative (Agent in your country) in charge for the details.

In foot finishing of loose cable-ends, process firmly not to cause removable. (No waterproof processing)

Multiple cable for general uses
TCX5-3C2VS Finished products

In permanent installations and less push/pull cases, set up Crimp type connector. In cable-ends loose finish, the basic bundle fixation easier than for hookup use cable, and process with shrinkable tube at last.
